

Flight Lab

A beautiful Baltic Birch table and frame holds this clear wind tunnel. It helps focus children's playful interest in air, wind, and Mother Nature's power. Concepts such as flight, air current, air resistance and gravity are explored through play and hands-on investigation. Two storage bowls positioned on either side of the tunnel hold objects you choose to offer to children and families. Try parachute men, tissue paper, coffee filters, and homemade dixie cup flyers. The fan is included.

The Flight Lab is 68 inches tall x 56 inches long x 25 inches wide.
